The global Ventilation Units market size is predicted to grow from US\$ 3302 million in 2025 to US\$ 4420 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

Ventilation is a building environment control technology that controls the spread and harm of air pollutants by means of ventilation dilution or ventilation elimination, and realizes the quality assurance of indoor and outdoor air environment. Ventilation Units are devices that implement this function, providing fresh air to buildings.

With the outbreak of the new crown epidemic, air quality has become a matter of great concern to people. In parallel the Government has also put forward a series of initiatives to improve air quality. Therefore ventilation regulations have changed and many developers will be adopting Mechanical Ventilation with Heat Recovery (MVHR) to meet the requirements, commercially and residentially.

In the future, residential and commercial markets to be major growth drivers of MVHR Units.

With the continuous expansion of the downstream application market, in order to occupy more markets, MVHR manufacturers will invest more R & D funds to launch more perfect products, and at the same time, in order to ensure the service life of the products, manufacturers will use better performing materials.

At present, the existing buildings in most countries in the world are built with low energy efficiency design and technology many years ago, and the energy efficiency is generally very low. In order to improve living standards and reduce environmental pollution, the

performance standards of commercial and residential buildings will also continue to improve, so the requirements for MVHR will also be stricter in the future.

The competition among vendors will increase during the forecast period. Vendors will compete to deliver competitive advantages in the market on the basis of pricing, user-friendly interfaces, value-added benefits, and service portfolios. During the forecast period, we expect this competition to intensify with an increase in product extensions.
