The Venturi Fertilizer Injector is a device that uses the Venturi effect (fluid dynamics principle) to mix fertilizer with water and automatically inject it into the irrigation system. It generates suction in the pipe through the difference in fluid pressure, which in turn sucks in concentrated fertilizer, mixes it with water, and evenly delivers it to the roots of plants. The Venturi Fertilizer Injector is simple in design and easy to operate. It can effectively control the amount and concentration of fertilizer applied. It is widely used in agricultural irrigation systems, especially in high-efficiency irrigation systems such as drip irrigation and sprinkler irrigation, to help improve fertilizer utilization and reduce fertilizer waste.
