The global Versatile Modular Dock market size is predicted to grow from US\$ 306 million in 2025 to US\$ 416 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

A versatile modular dock is a platform or ramp supported by pontoons. It is usually joined to the shore with a gangway. The pier is usually held in place by vertical poles referred to as pilings, which are embedded in the seafloor or by anchored cables.

Globally, the construction and renovation of waterfront infrastructure is driving the growth of the floating dock market. This includes new harbor developments and the upgrading of old piers to accommodate the needs of modern vessels. As interest in water-based recreational activities increases, so does the demand for floating docks. These marinas provide convenient docking and maintenance services for yachts and vessels, especially in tourist hotspots, driven by increased demand for recreational boating and marine tourism, development of waterfront infrastructure and an increased focus on sustainable and environmentally friendly solutions. The multi-purpose floating dock market is experiencing solid growth. The growth of the Chinese market in this area is particularly significant and is expected to continue its growth trend in the coming years.
