VA stands for vertical alignment. The name comes from the vertical alignment of crystals. They are known as a cheaper but not the lowest cost option and are really a jack of all trades. VA panels still offer good colors especially when looking at contrast ratios, allowing for brighter whites and darker blacks. Their short coming is their response times that used to be the cause of ghosting issues which made high motion gaming look smeary. Now adays they're a mid-ranged option that do everything decently and are more commonly found in curved monitors.
