Vertical circulation parking equipment is an efficient mechanical parking system that realizes automatic access to vehicles through vertical circulation. The system uses a vertical lifting device and a rotating platform, which can circulate in the vertical space to maximize the use of limited space. After the vehicle enters the equipment, the system will automatically store it in the appropriate location and quickly deliver the vehicle to the exit when picking up the vehicle. This kind of equipment is suitable for places with small space but large parking demand, such as urban business districts and high-rise buildings.

The global Vertical Circulation Parking Equipment market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
