The global Vertical Electron Beam Evaporator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Vertical Electron Beam Evaporator is a type of physical vapor deposition (PVD) system used for thin film deposition in the semiconductor and optics industries. It utilizes an electron beam to heat and evaporate a solid material, which then condenses onto a substrate to form a thin film. The vertical design of the evaporator allows for precise control of the deposition process and uniform coating of substrates. This type of evaporator is commonly used for depositing materials such as metals, oxides, and nitrides onto substrates for various applications in electronics, optics, and coatings.
