A Vertical Fully Automatic Insulating Glass Production Line is an advanced manufacturing system designed for the continuous, upright processing of insulated glass units (IGUs) with minimal manual intervention. This line operates with the glass sheets standing vertically throughout each stage — from automatic loading, washing, spacer positioning, gas filling, pressing, to sealing — ensuring a compact footprint and high production efficiency. Equipped with intelligent CNC control, precise servo systems, and real-time diagnostics, the vertical line is ideal for producing high-performance double or triple glazing used in energy-efficient windows, curtain walls, and facade systems. It offers superior output quality, improved worker safety, and seamless integration into smart factory workflows.
