The global Vertical Liquid Silicone Rubber Injection Molding Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Vertical liquid silicone rubber (LSR) injection molding machines feature vertical clamping and injection units and are commonly used for insert molding, over-molding, and other specialized applications where horizontal machines are less suitable. This design is particularly beneficial for applications requiring high precision and control. Vertical LSR injection molding machines offer several advantages, such as a smaller footprint, making them ideal for facilities with limited floor space. The direct injection of LSR material into the mold cavity minimizes the risk of material leakage, thus enhancing the accuracy and control in insert molding and over-molding processes. They are also well-suited for low-volume production or prototyping, providing greater flexibility for small-scale manufacturing needs.
