Vertical planetary mixer is a type of mixing equipment commonly used in chemical, pharmaceutical, food and other fields. Its working principle is similar to traditional planetary mixers, but its characteristic is that the mixers are arranged vertically, so it is called a vertical planetary mixer. Its main structure includes components such as frame, transmission device, agitator, etc. The agitator is usually composed of a main shaft, mixing arm, mixing plate, etc. When the equipment is started, the main shaft is driven by the transmission device, and the mixer starts to rotate. At the same time, the mixing arm moves along the trajectory of the main shaft, placing the mixing plate in the material tank for mixing and stirring.

The global Vertical Planetary Mixer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
