The global Vertical Rotary Parking System market size is predicted to grow from US\$ 509 million in 2025 to US\$ 754 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2025, global Vertical Rotary Parking System production reached approximately 4,800 sets, with an average global market price of around 108,500 US\$/set.

A Vertical Rotary Parking System is a mechanical automated parking system that stores vehicles in a vertical circular or chain-driven carousel structure, similar to a Ferris wheel layout. Cars are parked on individual pallets or platforms, and the system rotates vertically to bring the selected vehicle to the ground-level entry/exit position. It is mainly used to increase parking capacity on very small land footprints, typically converting the space of about two conventional parking bays into multiple stacked parking spaces, while reducing the need for long ramps, wide drive aisles, and large underground or multi-storey concrete parking structures.

Demand for Vertical Rotary Parking Systems is driven by urban land scarcity, rising vehicle ownership, redevelopment of old residential and commercial districts, and the need for compact parking solutions near offices, hospitals, hotels, schools, transport hubs, and apartment buildings. The main business opportunity lies in small and medium-size sites where conventional parking expansion is difficult, especially in dense Asian cities and land-constrained urban centers. Compared with large robotic or tower parking systems, vertical rotary systems offer relatively simple structure, fast installation, modular capacity expansion, and lower civil construction requirements, making them attractive for retrofit projects. However, market growth depends on equipment reliability, safety certification, maintenance service capability, retrieval speed, local approval

standards, and user acceptance, so manufacturers with strong installation experience, after-sales networks, and localized engineering support have stronger competitive advantages.
