Vertical subsea tree system refers to an equipment configuration used in offshore oil and gas production operations. It is a critical component of the oil wellhead system, which controls the flow of hydrocarbons from the subsea reservoir to the surface facilities. The vertical subsea tree system is typically installed on the seabed and consists of valves, chokes, and other control devices that manage the flow of oil, gas, and other fluids from the well. It is designed to withstand high-pressure and high-temperature conditions, as well as resist the corrosive effects of seawater. The vertical subsea tree system ensures efficient and safe operation of the well, allowing for the production of hydrocarbons from offshore reservoirs.
