A Vessel Tracking API is a type of software interface that enables developers to obtain real-time and historical information about vessels. By using unique identifiers such as the International Maritime Organization number (IMO) and Maritime Mobile Service Identity (MMSI), the API can track the position, route, and status of individual vessels. It provides comprehensive data including latitude, longitude, heading, speed, navigational status, destination, estimated time of arrival (ETA), and ports of arrival and departure. Additionally, some Vessel Tracking APIs may offer other relevant information such as weather conditions in port areas. The data sources for these APIs include terrestrial or satellite-based Automatic Identification System (AIS) receivers, ensuring global coverage and accuracy in maritime tracking. This type of API is crucial for various applications, including logistics and shipping management systems, port operations, and navigational safety, as it helps users make informed decisions and optimize their operations.

United States market for Vessel Tracking API is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
