The global Veterinary CRO and CDMO market size is predicted to grow from US\$ 7204 million in 2025 to US\$ 13080 million in 2032; it is expected to grow at a CAGR of 9.1% from 2026 to 2032.

The key players operating in the animal health industry prefer contract outsourcing over in-house manufacturing, considering its associated benefits. Owing to the complex manufacturing processes of certain veterinary products, animal health drug or device manufacturers solely outsource key stages of production to expertise CROs and CDMOs. Outsourcing activities enable companies to reduce financial risk and encourage more developments & research in the field.

The market growth is majorly propelled by factors, such as the wide adoption of veterinary outsourcing services owing to the therapeutic experience of Contract Development & Manufacturing Organizations (CDMO) and Contract Research Organizations (CRO), technical competence, high reliability, quality, & cost efficiency in outsourcing key processes of product development, and improved geographic convenience with local players. In addition, the on-time development & delivery of final products, coupled with the smooth introduction of novel veterinary drugs or devices into the market in compliance with specific regulatory standards, are boosting the market growth.
