The global Veterinary Digital Imaging Solution market size is predicted to grow from US\$ 1854 million in 2025 to US\$ 2962 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Veterinary Digital Imaging Solution refers to a digital diagnostic imaging system designed for animal hospitals, veterinary clinics, livestock farms, and research institutions. It typically comprises modules such as digital X-ray (DR/CR), veterinary ultrasound, CT/MRI, dental imaging, image acquisition software, PACS storage, remote consultation, and AI-assisted diagnosis. These systems are utilized in scenarios involving animal disease screening, orthopedic examinations, soft tissue diagnostics, dental care, and pre-operative assessments.

The market for veterinary digital imaging solutions is evolving from the mere sale of standalone imaging equipment toward an integrated service model encompassing 'equipment + software + cloud storage + remote diagnostic imaging.' Rising consumer spending on pet healthcare, the expansion of veterinary hospital chains, increasingly sophisticated diagnostic and treatment practices, and the widespread adoption of digital medical record systems are driving the rapid penetration of DR systems, portable ultrasound devices, dental imaging equipment, and cloud-based PACS. Concurrently, AI-driven image enhancement, low-dose imaging, mobile devices, and remote radiology consultations are emerging as key technological trends. While North America remains a mature market, the Asia-Pacific region is experiencing faster growth, fueled by increased investment in both pet healthcare and livestock veterinary services.
