An adjuvant is a substance that is formulated as part of a vaccine to enhance its ability to induce protection against infection. Adjuvants are substances added to vaccines to enhance the immunogenicity of highly purified antigens that have insufficient immunostimulatory capabilities. And many vaccines also contain an adjuvant or adjuvant combination: these are substances added to vaccines specifically because of their immune enhancing effects. Adjuvants were initially used to counter the poor immunogenic potential of highly purified antigens. In recent years their role has expanded as our understanding of the immunology of vaccination has grown.

Global 5 largest manufacturers of Veterinary Vaccine Adjuvants are SEPPIC, Croda, Vertellus, SPI Pharma and SDA BIO, which make up about 70%. Among them, SEPPIC

is the leader with about 35% market share.

North America is the largest market, with a share over 30%, followed by Asia-Pacific and Europe, with the share about 30% and 22%. In terms of product type, Emulsion Adjuvants occupy the largest share of the total market, about 58%. And in terms of application, the largest application is Livestock Vaccines, followed by Companion Animals Vaccines.
