The global Veterinary X-ray Examination Table market size is predicted to grow from US\$ 89.22 million in 2025 to US\$ 143 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2025, global sales of veterinary X-ray examination tables reached 24,000 units, with an average selling price of US\$3,800 per unit. A veterinary X-ray examination table is a specialized auxiliary device for animal medical imaging diagnosis, typically used in conjunction with a veterinary X-ray machine or digital DR system. It provides stable support and positioning for the animal during imaging to ensure image quality and diagnostic accuracy. This equipment usually uses a tabletop made of high-transmittance materials, such as carbon fiber panels or high-density composite materials, combined with a steel or aluminum alloy support structure. It features high strength, low radiation absorption, and easy cleaning and disinfection, meeting the imaging needs of veterinary hospitals and large animal clinics. Some high-end products are also equipped with adjustable height structures, sliding positioning devices, and animal restraint accessories to improve imaging efficiency and safety. Upstream raw materials mainly include carbon fiber composite panels, steel or aluminum alloy structural components, slide rail assemblies, motors, and surface protective materials. Upstream suppliers are mainly metal processing companies, composite material manufacturers, and mechanical parts manufacturers. Downstream customers are primarily veterinary hospitals, animal clinics, and veterinary teaching institutions. The global industry's total production capacity is approximately 32,000 units, with an average gross profit margin of about 24%. With the increasing number of pets globally and the improvement of pet healthcare standards, the frequency of use of imaging diagnostic equipment in veterinary clinics is constantly increasing, driving steady growth in demand for veterinary X-ray examination tables. Meanwhile, market opportunities still

exist in large-scale ranch animal clinics, specialized pet hospitals, and veterinary teaching markets, driven by equipment upgrades and new configurations.
