VHF Radio Sets are devices that utilize the very high frequency (VHF) band (30-300MHz) for wireless signal transmission and reception. The electromagnetic waves in this frequency band mainly propagate in straight lines, and the propagation distance is usually limited by the line of sight. However, under certain specific conditions (such as atmospheric refraction), the propagation distance may increase. It has the characteristics of high communication quality, relatively simple equipment, and low cost, and is widely used in multiple fields. It is an important tool for achieving short-range wireless communication.
