A vial is a small vessel made of glass or plastic, mainly used for storing a medicinal solution, drug, or powder. It is the most prevalent healthcare packaging solution. Since packaging of medicines is a complex process because of their molecular and chemical structures, they need to be packed in protective and durable materials to prevent contamination. The evolution of new diseases and increased health awareness have brought a transformation in the vial packaging market. Companies are making use of high-tech glasses and green plastics to keep medicines safe and are prioritizing environmentally-friendly products.

According to the report, significant growth in emerging countries is a key driver for this market. The global vial product manufacturers are focusing on emerging countries,

including Brazil, Russia, India, and China (BRIC) to expand their operations. The governments in these countries are taking initiatives to build healthcare infrastructures and increase healthcare budgets. They are also focusing on the improvement of diagnostic procedures. Due to air pollution and water contamination, there has been an increase in the prevalence of chronic and infectious diseases. BRIC countries are an attractive market for multinational corporations in the healthcare industry owing to the rising awareness among consumers about chronic and infectious diseases.
