Vibrating Pre-Cleaner is a cleaning device used to remove large particles and fine debris from grains, seeds, nuts, and industrial raw materials. The device generates vibrations through a motor drive, which allows the material to be layered, screened, and separated on the screen, effectively improving the purity and quality of the material. The vibrating pre-cleaner is compact and efficient, and is suitable for many fields such as agriculture, food processing, and industrial production. It can perform preliminary cleaning before the material enters the subsequent fine processing process, reducing equipment wear and optimizing production efficiency.
