The annual production capacity of a single production line is approximately 6,000 units, with an average gross profit margin of approximately 30%. Vibrating Wire Rebar Meter is a sensor used to monitor stress or strain in reinforced concrete structures. It utilizes the vibrating-wire strain gauge principle to measure strain changes in the rebar and convert them into stress data. The sensor can be installed on rebar via arc welding or threaded connections and embedded within the concrete structure. It is commonly used in projects such as dams, bridges, tunnels, and foundation pits to assess structural safety and monitor long-term deformation.

The upstream supply chain for Vibrating Wire Rebar Meter primarily includes core raw materials such as specialty steel wire, stainless steel casings, electromagnetic coils, and signal cables, as well as machining services that provide precision machining services. Its downstream supply chain directly targets end-use applications in civil engineering, such as structural health monitoring of bridges, dams, tunnels, and slopes.
