Vibration Damping Levelling Feet are mechanical components designed to provide both height adjustment and vibration isolation for machinery and equipment. These feet consist of a threaded stud, a base (often made of metal or reinforced plastic), and a vibration-damping element such as rubber or elastomer that absorbs mechanical vibrations, shocks, and noise. By ensuring stable and level positioning of equipment on uneven floors, these levelling feet enhance operational safety, prolong machine life, and improve performance by minimizing resonance and oscillations during operation.
