The global Video Conference Terminals market size is predicted to grow from US$ 2214 million in 2025 to US$ 2645 million in 2031; it is expected to grow at a CAGR of 3.0% from 2025 to 2031.

A video conference terminal is a multimedia communication terminal device, and people participate in a video conference by means of the terminal.

The hardware video conferencing terminal market has maintained a good market growth based on a relatively high base last year, but at the same time, it has also seen the explosive growth of smart screen products, crowding out the market space of traditional video conferencing terminals. In addition, with the increase in the utilization rate of video conferencing, the demand for capacity expansion of hardware video conferencing platform products (MCU, conference management, etc.) has been driven, which has driven the growth of the platform product market higher than the average growth rate.
