The global Video & Film Post-Production market size is predicted to grow from US\$ 9701 million in 2025 to US\$ 16890 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

Video and film post-production refers to the process of editing, processing and optimizing video and audio materials after shooting. This process includes editing, special effects production, color grading, sound design, dubbing, subtitles and other links, the purpose of which is to enhance the visual and auditory effects of the film and achieve the final presentation effect.

The video and film post-production market is undergoing rapid transformation, driven by both technological innovation and content demand. New technologies such as AI-assisted editing, cloud rendering, and virtual production are reshaping the post-production process, significantly improving efficiency and creative potential. With streaming platforms like Netflix and Disney+ driving a surge in global content production, demand for post-production services continues to rise. Asian markets, particularly China and India, are the fastest-growing emerging regions. However, the industry also faces challenges such as a shortage of high-quality talent, high software licensing costs, and data security and copyright protection. In the future, real-time post-production, virtual reality content production, and automated editing will be key trends driving market evolution.
