Abstracts

The global Video Ground Loop Isolators market size is predicted to grow from US\$ 502 million in 2025 to US\$ 802 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2024, global video ground loop isolators produced about 32 million units annually against 40 million units of capacity, the average unit price is about USD 15, with manufacturers maintaining an average 33% gross margin as OEM suppliers in China and Taiwan continue to dominate this low-cost CCTV accessory segment. Video Ground Loop Isolators are inline electronic modules used in analog CCTV systems (typically coax-based CVBS, AHD, TVI, CVI) to break unwanted ground potential differences between cameras and DVRs, preventing hum bars, rolling interference, and signal distortion; they work by using isolation transformers or differential balancing circuits that block low-frequency ground currents while allowing the video signal to pass. Their supply chain begins with upstream components such as ferrite cores, isolation transformers, PCB assemblies, resistors/capacitors, BNC connectors, housing shells, and epoxy potting compounds; midstream manufacturers then perform PCB population, transformer winding, signal-balancing calibration, and enclosure assembly; downstream distribution involves security-equipment wholesalers, CCTV integrators, and installers who use these isolators in long-run coaxial surveillance deployments where buildings have multiple electrical grounds.

United States market for Video Ground Loop Isolators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Video Ground Loop Isolators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Video Ground Loop Isolators is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
