Video otoscopy can detect wax and other abnormalities. An easy and comfortable examination, the screening process involves a tiny fibre-optic camera which is inserted into the ear canal. A real-time video will be displayed in high-definition on a monitor, enabling audiologist to carry out a detailed inspection of the ear canal and ear drum. Physical abnormalities such as wax, infection or foreign bodies (e.g. cotton buds) are easily identifiable as a possible contributing factor to your symptoms of hearing loss.
