A pyrometer is a type of remote-sensing thermometer used to measure the temperature of a surface. Various forms of pyrometers have historically existed. ... Modern pyrometers or infrared thermometers also measure the temperature of cooler objects, down to room temperature, by detecting their infrared radiation flux.

Increasing automation in the industrial sector and increasing demand for robust temperature-measuring devices in industries, such as glass, forging, and ceramics, are some of the driving factors for the growth of the pyrometer market. In the aforementioned industries, the devices used must be efficient and robust to perform precise operations even in harsh environments, and pyrometer is one such device. Most processes and systems in the manufacturing industry are being automated, and accurate temperature measurement with pyrometer is one such process. This factor would increase the demand for pyrometers in the industrial sector.
