The global Video Recovery APP market size is predicted to grow from US\$ 47.36 million in 2025 to US\$ 70.75 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

To address the challenges of recovering accidentally deleted videos, data loss due to damaged storage devices, and the high barrier to entry for video restoration, video recovery apps have emerged. Since the popularization of mobile storage and data recovery technologies in the 2010s, the data recovery and mobile application fields have seen significant development. Currently, video recovery apps have evolved into professional tools covering various types, including deep scanning, format repair, and cloud backup recovery. They are widely used in areas such as recovering accidentally deleted videos for personal users, rescuing footage for photographers, and restoring security surveillance videos, significantly improving data recovery success rates and user information security.

The video recovery app market is currently in a critical period of transformation towards 'intelligentization - cloudification - service-orientedization.' Driven by policy, technology, and demand, companies need to focus on differentiated functions (such as AI recovery and professional services), cultivate vertical scenarios (such as photography/design), and build an ecological cooperation network to cope with homogeneous competition and the challenges of technological iteration, and achieve sustainable development.
