According to this study, the global Video Surveillance Solutions market size will reach US\$ 73670 million by 2031.

A video surveillance system is a network of cameras, monitors/display units, and recorders. Cameras can be either analog or digital with various features to explore, such as resolution, frame rate, color type, and more. Whether applied inside or outside the building, it operates 24/7, designed only for recording movement when necessary.

The camera's purpose is to deter improper behavior, and the video footage can also serve as evidence for later review by security staff or law enforcement. Depending on your needs, there are many different video surveillance systems available, such as live monitoring, remote access via an IP system, and Digital Video Recorders (DVR) for recording footage.
