Video Transcoding Software is a type of media processing software used to convert digital video files from one format, codec, resolution, bitrate, or streaming protocol into another to ensure compatibility across devices, platforms, and network conditions. It plays a critical role in video streaming, broadcasting, OTT media delivery, cloud gaming, video conferencing, surveillance storage, social media distribution, and enterprise media management. The supply chain of Video Transcoding Software starts upstream with semiconductor and infrastructure providers supplying CPUs, GPUs, AI accelerators, storage systems, and cloud computing platforms, along with codec technology developers supporting standards such as H.264, H.265/HEVC, AV1, VP9, and MPEG formats. Midstream includes software developers and platform providers that design transcoding engines, encoding algorithms, cloud transcoding platforms, live streaming processors, and media workflow orchestration systems, often integrating AI-based compression optimization and adaptive bitrate streaming technologies. Downstream customers include OTT streaming platforms, broadcasters, telecom operators, social media companies, online education providers, surveillance system operators, gaming companies, enterprises, and government organizations that use transcoding software for content distribution, bandwidth optimization, archive conversion, and multi-device video delivery.

United States market for Video Transcoding Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
