The global Video Type AIGC market size is predicted to grow from US\$ 9736 million in 2025 to US\$ 24689 million in 2032; it is expected to grow at a CAGR of 15.8% from 2026 to 2032.

Video Type AIGC refers to artificial intelligence systems capable of generating, editing, extending, and transforming video content using deep learning models such as diffusion models, transformer architectures, and multimodal generative systems, enabling automated production of short-form and long-form videos from text, images, or other video inputs.

Current and planned projects in the Video Type AIGC sector include development of next-generation long-form video generation models, expansion of multimodal AI systems combining video, audio, and text generation, construction of large-scale GPU cloud infrastructure to support real-time rendering, enterprise deployment of AI video tools for marketing and film production, integration of AI video generation into social media and creative platforms, and research initiatives focused on improving temporal consistency, realism, and controllability, driven by increasing demand for automated video content production, rapid growth of short-form video platforms, and digital transformation in media and entertainment industries worldwide.

2025 Global Market Average Gross Profit Margin: 70%.

The Video Type AIGC market represents one of the most rapidly expanding segments within generative artificial intelligence, driven by explosive demand for video content across entertainment, advertising, education, and social media platforms. Advances in diffusion-based video models and multimodal AI systems have significantly improved

video generation quality, enabling the creation of realistic, high-resolution, and temporally consistent video content. This has reduced production costs and democratized access to video creation tools, allowing both enterprises and individual creators to produce professional-grade content without traditional filming infrastructure.

From a regional perspective, North America leads in technological innovation and early commercialization, supported by strong AI research ecosystems and major technology companies. Asia-Pacific is the fastest-growing region, driven by massive short-form video consumption, e-commerce video advertising, and strong adoption in China, Japan, and South Korea. Europe shows steady growth, particularly in media production and enterprise applications, while emerging markets are increasingly adopting AI video tools as digital infrastructure expands.

Market opportunities are substantial in short-form video generation, automated advertising content, virtual influencers, gaming cinematics, and personalized video communication. Integration with social media platforms and e-commerce ecosystems is accelerating adoption. However, risks include high computational costs, copyright and intellectual property concerns, deepfake misuse, and regulatory scrutiny over synthetic media. Ensuring content authenticity and ethical use remains a major industry challenge.

Key trends include rapid adoption of text-to-video and image-to-video systems, increasing focus on real-time video generation, and integration of audio-visual multimodal models. The rise of AI-powered video editing tools is also transforming post-production workflows. The competitive landscape is highly dynamic, with major technology companies, cloud providers, and specialized AI startups competing on model quality, speed, and ecosystem integration. As the market matures, differentiation will depend on realism, controllability, scalability, and compliance capabilities, positioning Video Type AIGC as a foundational technology for the future of digital media production.
