The global Viral Clearance Service market size is predicted to grow from US\$ 559 million in 2025 to US\$ 1603 million in 2031; it is expected to grow at a CAGR of 19.2% from 2025 to 2031.

Viral clearance services refer to viral removal or viral inactivation service. Viral clearance studies are a critical element toward ensuring that an acceptable level of viral safety has been achieved for biological products. The goal of these studies is to demonstrate that the manufacturing purification process has the ability to inactivate and/or remove viruses that are known to contaminate or which may possibly contaminate the starting materials, as well as additional viruses that are models for a broad variety of viruses. Viral clearance studies provide a complementary strategy to direct testing of cell banks, raw materials and bioreactor harvests, which may not detect all viruses that could potentially contaminate the product.

North America is the largest Viral Clearance Service market with about 51% market share. Europe is follower, accounting for about 23% market share. The key manufacturers are Charles River, BioReliance (Merck), Eurofins Scientific, Sartorius, Covance, ViruSure, Texcell, Bioscience Labs, Vironova Biosafety, Mérieux NutriSciences, WuXi AppTec, Syngene, Labor Dr. Merk etc. Top 3 companies occupied about 39% market share.
