The global Virgin Fibre Grease Resistant Papers market size is predicted to grow from US\$ 252 million in 2025 to US\$ 337 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Virgin Fibre Grease Resistant Papers are specialty papers made from unprocessed, virgin fibers that offer resistance to grease and oil. These papers are commonly used in food packaging, such as wraps for burgers, sandwiches, or pastries, to prevent grease from soaking through. Their grease-resistant properties come from either the natural composition of the fibers or the application of treatments, like fluorochemicals or other coatings. Virgin fibers provide a strong, clean base for paper production, ensuring high-quality strength, purity, and food safety standards.

The market for Natural Greaseproof Wrapping Paper has experienced steady growth due to increasing consumer demand for eco-friendly packaging solutions. As sustainability continues to be a key focus in industries such as foodservice and retail, businesses are increasingly opting for materials that are biodegradable and free from harmful chemicals. The rising awareness about environmental impacts has led to a shift towards packaging that not only meets functional requirements but also aligns with environmentally conscious practices. This shift is further supported by government regulations promoting the reduction of plastic usage, driving manufacturers to explore alternatives like natural greaseproof paper. Additionally, consumer preference for products that promote health and safety, such as those free from synthetic coatings, is contributing to the market's expansion. As the demand for sustainable packaging solutions grows, the natural greaseproof wrapping paper market is expected to continue its upward trajectory, with innovations aimed at improving product performance and increasing accessibility.
