## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Virtual healthcare mentions the virtual visits that take place amongst patients and clinicians via communication technology- the video and audio connectivity that allows virtual meetings to occur in real time, from virtually any location. A virtual visit can be a video conference between a doctor and patient at home. It could mean that a patient can cooperate with offsite medical specialist via a high-definition conference hookup at his or her local clinic, instead of travelling to another city. It can also give patient the chance to more readily find qualified second opinion online. Thus, virtual healthcare has been used chiefly for meetings and consultations, check-ins, and status report, rather than for in-depth diagnosis or treatments. Still, as the technology grows, more serious conditions like diabetes are falling under the inspiration of virtual healthcare. Virtual healthcare also better allows specialists to monitor conditions or procedures from remote locations.
