The global Virtual Private Network (VPN) Routers market size is predicted to grow from US\$ 270 million in 2025 to US\$ 578 million in 2031; it is expected to grow at a CAGR of 13.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report mainly studies virtual router market. A Virtual Router, or vRouter, is a software function that replicates in software the functionality of a hardware-based Layer 3 Internet Protocol (IP) routing, which has traditionally used a dedicated hardware device. Because virtual routing liberates the IP routing function from specific hardware, routing functions can more freely move around a network or data center. In basic software routing function, routing software is added to the commodity server and that piece of hardware becomes a router. In a more sophisticated distributed routing environment, pieces of the routing software can be moved around entire networks while being managed by a centralized control plane.

By Product Type Segment, the software solutions segment is dominating the market in 2019. By Application, based on end user, the Service Providers segment is dominating the market in 2019. Based on the region, USA market holds the largest market share for virtual router market with about 56% in 2019.
