Virtual private networks (VPNs) enable users to connect to private, secure networks. Companies utilize corporate VPNs to provide their employees with secure, encrypted, and remote access to the company's internal network. This enables employees to access applications, files, printers, and other corporate resources on the corporate network as if they were at the office. Conversely, consumer-grade or personal VPNs are used by individuals to encrypt their data and mask their location when connecting to unsecured public networks such as at airports, libraries, or coffee shops.
