The global Virtual Reality Cardboard market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

VR cardboard which is also known by terms such as Google Cardboard and VR headsets are devices that act as a mount for smartphones and tablets. It is a platform developed by Google that provides downloadable instructions to individuals and manufacturers for building VR headsets. The name suggests that the headset can be built out of cardboard, but does not necessarily mean that other materials cannot be used. The market is still in the initial stages of commercialization, but has witnessed several vendors offering products across all geographies.

QYResearch's market research analysts estimate factors like the low cost of VR headsets to drive market growth in the next five years. The assembly parts used to manufacture VR cardboards are cost effective and do not require heavy machinery or huge manufacturing plants to produce these VR cardboards. This low cost of VR cardboards is expected to foster its adoption during the forecast period.
