Virtual reality (VR) development software is a tool used to create and develop virtual reality experiences. Virtual reality is a technology that enables users to immerse themselves in a virtual digital environment by simulating real-world environments and situations. VR development software usually provides various functions and tools, such as virtual environment modeling, interaction design, physics engine, user interface development, etc., to help developers build various virtual reality applications and experiences.

The augmented reality (AR) development software market is currently characterized by rapid growth and intense competition. Driven by demands from enterprise digital transformation, immersive training, remote collaboration, retail, and advertising, AR development platforms are maturing across platforms, from head-mounted displays and mobile devices to wearable devices, emphasizing ease of use, cross-device consistency, real-time performance, and performance optimization. Mainstream trends include robust 3D/scene understanding, real-time rendering and lighting, cross-industry templated solutions, no-code/low-code development capabilities, and deep integration with cloud content management, AI-assisted design, IoT, and enterprise-level security compliance. Market competition focuses on the richness of the toolchain ecosystem, development efficiency, rendering quality, location tracking stability, and the ability to rapidly deploy across multiple scenarios (education, manufacturing, healthcare, retail, etc.).
