Virtual veterinary care is a new model of care that leverages modern technologies, such as the Internet, telemedicine, and virtual reality, to provide veterinary services to pets and livestock, among others. This model of care overcomes the limitations of geography and time, making it easier and more efficient for veterinary services to reach pets and livestock in need. In virtual veterinary care, veterinarians can communicate with pet owners through an online platform to answer questions about pet health and disease. In addition, veterinarians can utilize video call technology to observe the pet's condition in real time and make initial diagnoses and treatment recommendations.
