The global Virus Filtration Solutions market size is predicted to grow from US\$ 8492 million in 2025 to US\$ 19160 million in 2031; it is expected to grow at a CAGR of 14.5% from 2025 to 2031.

Virus filtration (VF) is a key step in an overall viral clearance process since it has been demonstrated to effectively clear a wide range of mammalian viruses with a log reduction value (LRV) > 4 . The potential to achieve higher LRV from virus retentive filters has historically been examined using bacteriophage surrogates, which commonly demonstrated a potential of > 9 LRV when using high titer spikes (e.g. 10(10) PFU/mL). However, as the filter loading increases, one typically experiences significant decreases in performance and LRV.

The major players in global Virus Filtration market include Merck KGaA, Asahi Kasei Medical, Pall Corporation, etc. The top 3 players occupy about 50% shares of the global market. North America and Europe are main markets, they occupy about 70% of the global market. Kits and Reagents is the main type, with a share about 40%. Biologicals is the main application, which holds a share about 50%.
