The global Virus like Particle (VLP) Vaccines market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Virus-Like Particles (VLPs) are an emerging vaccine technology. VLPs consist of protein shells comprising outer proteins specific to the virus in question. VLPs are more representative of how viral antigens are presented in vivo. While they are highly immunogenic, they are non-infectious as they lack the core genetic material of the virus. Another essential advantage of VLPs is that they more effectively activate critical aspects of the immune response to achieve potent immune stimulation and provide immunological memory. VLP-based vaccines have also shown to provide effective protection and are currently used for several diseases.
