The global Virus-like Particles (VLPs) Delivery System market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Virus-like particles (VLPs) are artificial protein structures with a similar overall structure to their corresponding native viruses. They resemble viruses with self-assembly properties but lose their original infectious ability due to genome modifications. VLPs are symmetrically built from hundreds of coat proteins, which can be genetically engineered to present a regular arrangement of epitope chains on the desired positions of the outer surface. Compared with monomeric or oligomeric protein carriers, VLPs are able to provide not only a higher density of foreign proteins per particle but also support a distinctive three-dimensional conformation, which is especially important for the presentation of conformational epitopes. Currently, VLPs have been recognized as one of the most promising and extensively studied molecular carriers or nanoparticles, for a variety of applications.

United States market for Virus-like Particles (VLPs) Delivery System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Virus-like Particles (VLPs) Delivery System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
