The Viral Serum Pentaplex Test Card is a diagnostic tool for the detection of multiple viral infections. It is usually a test strip or card that is coated with specific antigens or antibodies. Antibodies to multiple viruses, including but not limited to influenza, RSV, adenovirus, parainfluenza, and RSV, can be detected simultaneously using this test card. When the medical staff collects the patient's serum sample, the sample is dropped on the test card. If antibodies to the corresponding virus are present in the sample, they bind to the corresponding antigen on the test card, resulting in a visible line or color reaction. According to the changes of the lines or colors on the test card, medical staff can judge whether the patient is infected with these viruses, so as to take corresponding

treatment measures in time.
