The global Virus Transport Medium (VTM) market size is predicted to grow from US\$ 203 million in 2025 to US\$ 288 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Virus Transport Medium (VTM) is a dedicated medical biological reagent formulated for the core link of viral sample transport from collection sites to detection/research laboratories, usually matched with sterile sampling swabs and disposable sealed sampling tubes as a complete sampling set; its formula is compounded with pH buffering agents, broad-spectrum antimicrobial agents (anti-bacterial/anti-fungal), and optional mild stabilizers, and is divided into inactivated and non-inactivated formulations according to usage needs. It is designed to inhibit the growth of contaminating microorganisms in samples, prevent the degradation of viral particles/nucleic acid during short-distance transport under ambient or mild low-temperature conditions, and maintain the basic structural integrity of viral samples (or biological activity for non-inactivated types), ensuring that transported viral specimens meet the quality requirements of subsequent nucleic acid detection, pathogen identification and basic experimental research. It is an essential basic reagent for clinical viral diagnosis, public health epidemic surveillance and on-site sampling work.

In 2025, global Virus Transport Medium (VTM) production reached approximately 52 million units, with an average global market price of around US\$ 4 per unit.

The upstream of the Virus Transport Medium (VTM) supply chain includes suppliers of high-purity chemical raw materials for reagent formulation (e.g., Tris, EDTA, sodium chloride, broad-spectrum antibiotics), manufacturers of medical-grade sterile consumables (e.g., nylon flocked sampling swabs, disposable plastic sampling tubes,

sealed rubber caps, sterile packaging materials), and providers of professional production and testing equipment (e.g., sterile filling and assembly machines, high-temperature/pressure sterilizers, microbial contamination detection instruments, pH value calibration equipment); the midstream is composed of enterprises engaged in VTM formula R&D, GMP-compliant sterile production, batch quality verification and medical device regulatory filing/registration, most of which produce VTM as an integrated sampling kit (medium + swab + tube) for convenient end-use operation; the downstream covers core terminal users including medical institutions (hospitals, clinics), disease control and prevention centers at all levels, entry-exit quarantine and port inspection agencies, grassroots community/village sampling points, third-party medical testing institutions, and veterinary epidemic prevention and control departments, with a small number of scientific research laboratories also using it for the short-distance transport of experimental viral samples.

The cost structure of Virus Transport Medium (VTM) is dominated by raw material and sterile consumable costs (the largest proportion of total cost), including high-purity chemical reagents for formulating the medium and medical-grade sterile sampling accessories (swabs, sampling tubes, sealed caps) that form the integrated kit?for the mainstream kit-type VTM, the cost of sterile consumables even exceeds the medium reagent itself due to strict medical grade and sterility requirements. Followed by production and quality control costs, including the operation and maintenance of GMP-compliant sterile production workshops, automated assembly and filling processes, and mandatory batch testing to meet medical device production standards. In addition, there are low-to-moderate R&D and regulatory compliance costs for formula optimization, transport stability testing and medical device product filing; auxiliary costs include sterile packaging, short-distance cold chain logistics, inventory management and basic after-sales technical support for downstream sampling users, with marketing and channel construction costs accounting for a relatively small proportion due to the standardized and universal attribute of VTM as a basic medical reagent.
