Viscose-based graphite soft felt is a type of graphite material produced from viscose fibers through a series of high-temperature treatments, including carbonization and graphitization. Viscose fibers are a type of regenerated cellulose fiber made from natural cellulose raw materials (such as wood, cotton linters, etc.) through chemical processing. During high-temperature exposure, non-carbon elements (such as hydrogen and oxygen) in the viscose fibers are gradually removed, and the carbon atoms rearrange to form a graphite crystal structure, ultimately resulting in the production of viscose-based graphite felt.
