Visual effects (abbreviated VFX) is the process by which imagery is created or manipulated outside the context of a live action shot in film making.

Visual effects involve in the integration of live-action footage (special effects) and generated imagery (digital effects) to create environments which look realistic, but would be dangerous, expensive, impractical, time consuming or impossible to capture on film. Visual effects using computer-generated imagery (CGI) have recently become accessible to the independent filmmaker with the introduction of affordable and easy-to-use animation and compositing software.

Visual effects are often integral to a movie's story and appeal. Although most visual

effects work is completed during post-production, it usually must be carefully planned and choreographed in pre-production and production. Visual effects primarily executed in post-production with the use of multiple tools and technologies such as graphic design, modeling, animation and similar software, while special effects such as explosions and car chases are made on set. A visual effects supervisor is usually involved with the production from an early stage to work closely with production and the film's director design, guide and lead the teams required to achieve the desired effects.

Visual effects primarily divides into two groups of:

Special effects: It covers any visual effects that take place in live action, e.g. on set explosions or stunt performances.

Digital effects (commonly shortened to digital FX or FX): It covers the various processes by which imagery is created or manipulated with or from photographic assets. Digital Effects often involve the integration of still photography and computer-generated imagery (CGI) to create environments which look realistic but would be dangerous, costly, or impossible to capture in camera. FX is usually associated with the still photography world in contrast to visual effects which is associated with motion film production.
