The visual intelligent gateway is a network device that integrates data processing, analysis and visualization functions. It is generally used in the Internet of Things (IoT) or other connected environments to collect, process and display data from different devices or sensors in real time. Visual smart gateways are commonly used in smart homes, smart factories, smart cities and other application scenarios to help users achieve more efficient data management and decision support.

The market for visual smart gateways is currently experiencing rapid growth and high integration. Serving as a bridge between AI algorithms, edge devices, and cloud applications, they are widely used in scenarios such as industrial automation, smart cities, energy management, security, transportation, and the Internet of Things (IoT). Driving factors include the increasing demand for real-time data visualization, multi-source data fusion, edge inference, and low latency, as well as the growing emphasis on data security, local processing, and compliance. Market competition is shifting towards both vertical industry-specific customization and cross-industry general solutions. Vendors are differentiating themselves in areas such as visualization capabilities, AI inference efficiency, device interoperability, data governance, and cloud-edge collaborative architecture, while enhancing scalability and ecosystem collaboration through open ecosystems, plug-in components, and open-source frameworks.
