There are many types of emollients that include vitamin A with D. One of the most common A&D ointment ingredients is petroleum jelly or zinc oxide. However, the key that makes A & D ointment creams work so well is the vitamins themselves.

As mentioned above, A&D ointments offer more benefits due to the vitamins and ingredients they have in them. These two vitamins work together to offer benefits that have natural antimicrobial properties. By doing so, they can help promote healthy skin cell growth, as well as help your body absorb calcium, fight against infections, and much more. This makes it great for tattoos, burns, extremely dry skin patches, small scrapes, and even cuts.

The global Vitamin A and D Ointment market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
