The global Vitamin C Glucoside (AA2G) market size is predicted to grow from US\$ 111 million in 2025 to US\$ 162 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2024, global Vitamin C Glucoside (AA2G) production reached approximately 892 tons, with an average global market price of around US\$120 per kilogram. The production capacity of a single production line is approximately 50-100 tons. The industry's gross profit margin is usually between 15% and 35%, and the cost is mainly composed of raw materials (vitamin C, glucose), accounting for about 40% to 60%.

Vitamin C Glucoside (AA2G), or Ascorbic Acid 2-Glucoside, is a natural Vitamin C, containing glucose stable ingredients, with excellent formulation stability. It helps inhibit discoloration and degradation, and retains all the biological activity.

Vitamin C Glucoside (AA2G) is valued for its enhanced stability and formulation friendliness compared with native ascorbic acid, making it attractive across cosmetics, personal care and nutraceuticals. Its enzymatic convertibility to active vitamin C provides a balance of efficacy and tolerability, which supports use in applications targeting brightening, antioxidant protection and gentle supplementation. Market momentum is propelled by consumer demand for effective yet mild actives, formulators' need for stable ingredients that withstand processing and shelf life, and broader trends toward clean-label and sustainable sourcing. Manufacturers can differentiate through processing innovations, higher-purity grades, tailored delivery systems (e.g., sustained release or blends) and robust regulatory or quality certifications. Key risks stem from competing vitamin C derivatives, evolving regulatory scrutiny around claims, and consistency of raw-material supply. Overall, AA2G's formulation versatility and

consumer-friendly profile position it favorably for continued adoption as brands prioritize safety, efficacy and sustainability in product development.
