According to our LPI (LP Information) latest study, the global Vitamin D Testing market size was valued at US\$ million in 2023. With growing demand in downstream market, the Vitamin D Testing is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Vitamin D Testing market. Vitamin D Testing are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Vitamin D Testing. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Vitamin D Testing market.

Vitamin D is vital for strong bones. It also has important, emerging roles in immune function and cancer prevention. Deficiencies at any stage of life can have devastating consequences. Similarly, vitamin D toxicity resulting from overmedication can cause serious hyperkalemia. Vitamin D consists of two bioequivalent forms:

Vitamin D2: obtained from vegetable sources (dietary sources, supplements)

Vitamin D3: derived from both endogenous (synthesized from cholesterol through sun exposure) and exogenous (animal diet) sources

Vitamin D deficiency is more common than previously believed, especially among

adolescents, women, and the elderly. For example, studies have shown that more than 50% of the institutionalized elderly and an equal proportion of women of any age undergoing treatment for osteoporosis have inadequate levels of vitamin D.¹ While treatment with vitamin supplementation is easy and inexpensive, many affected individuals go undiagnosed and untreated.

The total 25-hydroxyvitamin D (25-OH-VitD) level (the sum of 25-OH-vitamin D2 and 25-OH-vitamin D3) is the appropriate indicator of vitamin D body stores. Although there is no universal consensus about a treatment cut point, studies suggest 25 to 35 ng/mL as the minimal concentration of 25-OH-VitD needed to avoid the adverse effects of deficiency.^{2,3,4} By contrast, population reference ranges do not correspond with healthy ranges. In northern latitude locations in particular, one-third of the population may have vitamin D levels less than 25 ng/mL at the end of winter.

Vitamin D Test in this report is test equipment; test reagents for Vitamin D Test.

In the Chinese market, the leading manufacturers are Diasorin, Abbott, Roche, Siemens, Thermofisher, Mindray Medical and Beckman Coulter, with a market share of about 79 percent.
