Abstracts

The global Vitamin E for Cosmetics market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Vitamin E is one of the most researched and applied anti-aging ingredients. It is the main fat-soluble antioxidant in the human body. It can remove free radicals in the body to block the generation of oxidation reactions, reduce and repair cell membrane damage, and achieve the effect of anti-aging . Because the cells contain only a very small amount of vitamin E, and the human body cannot synthesize it, it can only be obtained from external supplements. Unrefined vegetable oils, almonds, and nut oils all contain more vitamin E.

The total size of the global beauty industry in 2022 was about US\$ 427 billion, with the sales of skin care products was about US\$ 190 billion, perfumes US\$ 70 billion, color cosmetics US\$ 80 billion, hair care products US\$ 90 billion. Head beauty and personal care companies are concentrated in Europe and the United States. More than one-third of the top 100 companies are headquartered in the United States, and 22.9% of the companies are located in France.
